[CRITICAL] High model-impact drift on 3 feature(s)

Source agent **data_drift**
Remediation type **data_pipeline_investigation**
Detected at 2026-08-30T18:04:08.794235+00:00

Affected features: Glucose, SkinThickness, Insulin.

- Glucose: 'Glucose' is at the 88th percentile of SHAP importance among tracked features (threshold=75th, raw importance=0.5135): the drift directly affects predictions.
- SkinThickness: 'SkinThickness' is at the 75th percentile of SHAP importance among tracked features (threshold=75th, raw importance=0.2962): the drift directly affects predictions.
- Insulin: 'Insulin' is at the 100th percentile of SHAP importance among tracked features (threshold=75th, raw importance=1.5079): the drift directly affects predictions.

Recommended action:

FINAL VERDICT -- pipeline issue confirmed, do NOT retrain yet: Insulin: 29.9% missing values this batch. Fix ingestion for Insulin first (schema, upstream source, mapping of new categories), then re-run this cycle on clean data before deciding whether real drift remains.

drift_percentage 62.5
features ["Glucose", "SkinThickness", "Insulin"]
psi_scores {"Glucose": 2.050971516799967, "SkinThickness": 0.033865466284832765, "Insulin": 10.62599276763946}
shap_adjusted true
